PROJECT EXPERIENCE

Burnr | Javascript (JS) | React | Redux | Jbuilder | AWS | Ruby | Ruby on Rails | PostgreSQL | CSS   **GitHub** \\ **Live**
- Utilized AWS S3 to store photos and new uploaded photos
- Incorporated modals to access edit options for photo and comments using ternary operators and Redux global state management
- Built two full CRUD features using Rails for backend server which provides data on request, and PostgreSQL to organize and query the database for photos and comments

Roominate | MondgoDB | Express | Javascript | React | Redux | Mongoose | AWS S3 | Dall-E 3 | CSS   **GitHub** \\ **Live**
- Programmed rotating photos on the splash page to show before and after photos of projects
- Implemented a drag and drop file upload area using Vanilla DOM eventListeners
- Filtered project photos by user by grabbing the project id through the url using React hooks

AdentureWise | Javascript (JS) | Node | svgMAP | TravelTablesAPI | Teleport Public API | CSS   **GitHub** \\ **Live**
- Navigated the use of two APIs to display a countries summary and country's cost data
- Modified element's list of classes at different points to identify if it was considered pinned or unpinned
- Customized a function to rotate data cards in chronological order and without duplicates by using a series of conditional and nested if-statements
